

Mold Spore Identification Laboratory

Don't pay overnight shipping charges and lose up to a day of analysis time. Have your non-viable mold samples dropped off and analyzed in our new North Florida facility.

ATLAS maintains an "in-house" Mold Spore Identification Laboratory at our Jacksonville location.

Our lab participates in the American Industrial Hygiene Association's Environmental Microbiology Proficiency Analytical Testing (EMPAT) Fungal Direct Exam Program.

EMPAT proficiency is the current industry accepted standard for laboratories performing mold identification. The laboratory must maintain a fully-implemented quality control program.
